🛡 Military Service : Completed

SUMMARY

Backend Developer specialized in Node.js, with training experience at **Botit Company**, where I worked on projects in a collaborative team environment. I have strong skills in **building and integrating backend APIs, database management**, and developing efficient backend systems. I'm writing **clean, scalable, and maintainable code**, with a continuous drive to improve backend performance, enhance system reliability, and contribute effectively to team success.

EDUCATION

Tanta University – Tanta,

10/2019 – 06/2023

Bachelor of Computer and Information Technology

Graduated with Very Good (3.3/4)

EXPERIENCE

Backend Software Engineer | Botit

01/2025 – Present | cairo

- Designed, developed, and maintained RESTful APIs using **Node.js, Express.js**, and **MongoDB**.
- Created and updated detailed **Swagger/OpenAPI documentation** to improve cross-team communication.
- Integrated **Twilio API** for SMS services and optimized existing communication flows.
- Collaborated with team members via **GitHub** and **Slack** to ensure smooth development workflows.
- Ensured high-quality and maintainable backend code through testing and continuous improvement

Achievements:

- Reduced API response time by 35% by optimizing RESTful endpoints using Node.js, Express.js, and MongoDB.
- Decreased SMS latency by 20% through Twilio API refactoring, improving scalability and reliability.

Graduation Project | E-Commerce Platform for Laptops

02/2023 – 07/2023

- Built scalable backend APIs for an e-commerce platform (products, users, cart, orders).
- Designed optimized database schema using *SQL Server* and *Entity Framework*, improving query speed by **25%**.
- Tested endpoints thoroughly in *Postman* following RESTful best practices.
- **Tech Stack:** ASP.Net,C#, Entity Framework, SQL Server, REST API

SKILLS

Languages: JavaScript (ES6+), TypeScript (Basics)

Backend: Node.js, Express.js, RESTful API Design, JWT Authentication, MVC Pattern

Database: MongoDB (Mongoose), SQL Server, Aggregation, Indexing

Testing & Tools: Jest,Postman, Swagger (OpenAPI)

Security: Helmet, Rate Limiting, Data Sanitization, Encryption

Deployment & DevOps: Render, Railway, GitHub Actions (CI/CD), Environment Variables

Concepts: OOP, Error Handling, Clean Architecture,

PROJECTS

Natours API (Backend Project) 🔗

- Developed a RESTful API for a tour booking platform using **Node.js, Express**, and **MongoDB** (MVC architecture).
- Implemented **JWT authentication**, advanced filtering, pagination, and image uploads.
- Deployed the backend on **Render** with **MongoDB Atlas**, achieving high availability.

Restaurant-API 🔗

- Built a **Restaurant Management API** using **Node.js, Express.js**, and **MongoDB**, following **MVC architecture**.
- Implemented **CRUD operations**, authentication, and middleware for route protection.
- Applied best practices for **error handling** and clean code structure

node-farms 🔗

- Built a simple **Node.js web server** from scratch using the **HTTP** and **FS** modules (no frameworks).
- Generated dynamic product pages using **template rendering** and real JSON data.
- Strengthened understanding of **core Node.js concepts** like routing, modules, and asynchronous programming.
